EBA's 2025 EU-wide stress test – DNB performs very well

- DNB amongst the best performing banks across Nordic and international peers

- Under the 2025 EU stress test¹⁾ DNB's CET1 ratio increased by 26 bps²⁾ (reduced by 212 bps in the 2023 EU stress test), which compares to a European average reduction of 304 bps²⁾

- In the Adverse Scenario, DNB's CET1 ratio is always above the MDA threshold, including the current countercyclical buffer ("CCyB"). The CCyB is likely to be reduced or removed in an Adverse Scenario.
- DNB is projected to generate positive net profit each year in the adverse scenario stress test

MREL requirement

- DNB's **MREL requirement**¹⁾ is ~37% of adjusted REA²⁾ – leading to a need for minimum **EUR ~14.1bn** in MREL eligible debt as per end Q1 2026
 - DNB's need for MREL eligible debt is influenced by excess CET1 capital
- As per Q1 2026 figures, the total MREL requirement can be fulfilled with **EUR ~6.9 bn in Senior Non-Preferred** and **EUR ~7.2 bn in Senior Preferred**

MREL fulfilment per Q1 2026

Subordinated MREL fulfilment per Q1 2026

¹⁾ The MREL requirement will vary over time based on changes in REA and capital requirements. This can also influence the split between Senior Non-Preferred and Senior Preferred. In addition, changes in DNB's buffer to minimum CET1 requirement will impact the volume of MREL eligible debt needed.

Counter-Cyclical Buffer (CCyB)

- CCyB in Norway increased to 2% with effect from 31 December 2022 and increased further to 2.5% with effect from 31 March 2023
- Taking into account countercyclical buffers in other countries, **DNB's effective CCyB was ~2.19% as per 31 March 2026.**

Systemic Risk Buffer

- The systemic risk buffer increased from 3.0% to 4.5% for Norwegian exposures from 31 December 2020. Taking into account systemic risk buffers in other countries, **DNB's effective systemic risk buffer was ~3.21% as per 31 March 2026**

Implementation of CRR/CRD IV

- Announced by Ministry of Finance December 2019.
- With the final implementation of CRR/CRD IV in Norway from 31 December 2019, the Basel I floor was removed and the capital requirements for exposures to Small and Medium sized enterprises were reduced (SME discount).
- The systemic risk buffer increased from 3% to 4.5% on Norwegian exposures from 31 December 2020.
 - For countries that do not have systemic risk buffer requirements, the rate is set to zero instead of previously proposed Norwegian buffer rate.
 - Taking into account reduced systemic risk buffers in other countries, DNB's effective systemic risk buffer was ~3.21% as per 31 March 2026.
- DNB's management buffer/Pillar 2 Guidance is 100 bp.

ADI – Available distributable items

- Items available for distribution is defined in the Norwegian Public Limited Liability Companies Act¹⁾:

Following this definition, the ADI level is calculated as follows:

ADI = total equity – share capital – fund for unrealised gains

- From 1 January 2019, DNB decided also to deduct additional tier 1 capital from the ADI

DNB Bank ASA (31 December 2025):

ADI = NOK ~247bn – ~18bn – ~4bn – ~23bn (AT1) = NOK ~202bn

⇒ Due to the significant amount available for distribution, we do not consider the ADI as a potential restriction for coupon payments.

¹⁾ The Norwegian CRD IV Regulation does not include any definition of ADI

Implementation of BRRD and change in creditor hierarchy

- The legislation implementing BRRD in Norway, entered into force 1 January 2019.
- The legislation sets forth that the resolution authorities shall establish a resolution plan for each institution with specific description of the tools available in a crisis situation. The resolution plan for DNB is not yet in place.
- In line with the BRRD, the creditor hierarchy is now changed so that deposits that are guaranteed by the Norwegian deposit guarantee scheme, as well as deposits from private individuals and small and medium sized enterprises, have priority before deposits from large corporates and unsecured senior debt, which again has priority before senior non-preferred debt and own funds instruments.
- One of the tools contemplated under the BRRD is the bail-in tool. According to the Norwegian law, any unsecured debt, except guaranteed deposits, may in principle be bailed in. The resolution authorities will however respect the hierarchy of claims.
- The implementation of the MREL requirement, including the subordination requirement, shall be made in such a way that no creditor will be worse off than it would have been in liquidation

DNB's legacy perpetual bonds (discos)

- On 16 November 2023, DNB announced, with reference to the legislative proposal published by the Ministry of Finance of Norway on 10 November 2023 regarding the implementation of BRRD Article 48(7) in Norway, its intention to redeem its outstanding legacy perpetual bonds
- On 15 January 2024, DNB announced that it would exercise its option to redeem its 3 Legacy Perpetual Bonds at par on 29 February 2024.
 - The announcement is available at <https://www.luxse.com/pdf-viewer/103973025>

Temporary write-down / conversion of AT1

- The CET1 trigger for temporary write-down in DNB's AT1 instruments is 5.125%.
 - DNB's CET1 ratio was 18.1% as of 31 March 2026
- Separately, Norwegian Statutory Point of Non-Viability Rules (the Norwegian Financial Institutions Act § 20-14) are in line with the [EU Bank Resolution and Recovery Directive \(BRRD\)](#) articles 59 and 60
 - Thus, in Non-Viability situation (assuming CET1 ratio above 5.125%), AT1 bondholders can only be written down if equity first has been written down to zero
- DNB's AT1 documents are available at <https://www.ir.dnb.no/funding-and-rating/funding-programmes/at-1-programme-outstanding-bonds>
